THE ULTIMATE GAP REMEDIATION SYSTEM FOR FIRE DOORS

WHAT IS FRAMEFIT?

FrameFit is a NEW & UNIQUE fully tested product that fits directly to door frames to reduce gap sizes to meet current fire door regulations.

Fire Door Inspectors will report a fire door as 'Non-Compliant' with gaps of over 4mm between the frame and leaf. On the bottom of a fire door, gaps of over 8mm (Fire Only Door) and gaps of over 3mm (Fire & Smoke Doors) will also be reported as 'Non-Compliant.' Until now the only remedy for excessive gaps is to replace the door with a new one.

FrameFit is designed with ease of fitting in mind, with selective thickness's such 1.5 mm (with or without smoke seal) - 3 mm and 5 mm to suit any gap variation. Widths to suit FD30's 44mm and FD60's 54mm. FrameFit comes on a roll and is easily cut to size and applied with minimal tools required.

✓ Fully tested to BS 476 Part 22 & BS EN 1634-1

77%

Of inspected fire doors
failed due to gaps between
the door and frame.
